Trojica Trading supplies, install, and repair a full range of road safety products and safety furnishings across Africa.

The company has successfully rolled out notable projects in KwaZulu-Natal, Western Cape, Gauteng, and other provinces in South Africa.

Established for service delivery despite during the coronavirus pandemic in 2020, Trojica Trading has set the standard for delivery despite challenges. If you cannot find a solution, Trojica will find it for you.

To date, the company has positively impacted on the quality of road safety infrastructure and the future of road safety projects.

Trojica Trading operates 24/7 and strives to achieve complete customer satisfaction.

## VALUE STATEMENT

When one has integrity, you act selflessly.

When one is honest, you act without self-regard.

When one is trustworthy, you act responsibly.

We believe in building meaningful relationships on integrity, honesty, and trust.

# PRODUCTS AND THEIR APPLICATION

**Trojica Trading supplies the following road furnishing products.**

## **Guardrails and guardrail accessories**

They provide drivers with a sense of safety and confidence

Guardrails are highly visible during the day and night.

They provide drivers with confidence and restrain out-of-control vehicles.

Guardrails are crucial road safety features that act as vehicle restraint as well as pedestrian protection systems.

**Trojica supplies accessories for both SANS 1350 and SANS 51317-2 specifications.**

## **Crash Cushions**

Crash cushions are a protective system that prevent vehicles from impacting obstacles, either by carefully decelerating or redirecting the vehicle. Crash cushions are typically located at toll gates.

## **Truck-Mounted Attenuators**

A truck mounted attenuator (TMA) is a safety apparatus that is welded to the rear side of a work truck. They act as mobile crash cushion systems that absorb the impact of high and low speed crashes. A TMA can also be attached as a trailer behind a safety truck.

## **Road Studs**

Road studs highlight the sections of the road and indicate the road border and lane divider.

Road studs guide motorists and help prevent accidents from swaying into oncoming traffic.

A driver will feel a bump when passing over a road stud, alerting them of the vehicle crossing over a lane divider.

## **Wire Rope**

A wire rope safety fence is a permanent fence that creates a strong and durable barrier. Wire rope road safety barrier systems (also known as WRSB) are cost effective crash control systems.

## **Delineators**

Delineators are temporarily installed on roadways to direct traffic through or away from hazardous road conditions or road construction works. A delineator marks a border and can indicate a boundary or temporary traffic lane.

## **Road Signs**

Road signs are crucial to overall road safety as they visually direct and instruct motorists. Road signs are typically either regulatory, warning, or guide signs.

## **Rumble Strips**

Rumble strips are basically grooves in the road that alert motorists by noise and vibration of a potential danger. Rumble strips help prevent accidents on roadways.

## **Other Products**

Trojica Trading offers a full range of road safety products, such as traffic cones, stop blocks, speed bumps, and bases.

## PPE AND CONSTRUCTION

In addition to the supply and installation of road safety systems, Trojica Trading supplies Personal Protective Equipment (PPE), handrails, gabions, new and used pneumatic ramming machines for guardrail installations, as well as timber and steel for construction projects. The company offers custom and specialised steel products and the installation and repair of many of the systems they install.

## LEADERSHIP

Trojica Trading is built on the skill and dedication of its director. Willem Prinsloo holds a diploma in Retail Business Management, boasts 13 years in road safety, and has successfully completed numerous road safety courses from leading institutions in Germany, the USA, and South Africa. Willem has installed and repaired safety systems that comply with SANS 1350 as well as SANS 51317-2, Mash, and NCHRP 350 regulations and specifications.

As project manager, Willem was responsible for the Bloemfontein Airport Interchange project, and R21, where the first crash-tested guardrail system was installed in South Africa. The Bloemfontein Airport Interchange project was initiated by the Free State Department of Police, Roads, and Transport in conjunction with the South African National Roads Agency Limited (SANRAL) in November 2007. He was additionally the first to supply and install a Super Rail system, with the highest containment system in South Africa. Willem served as project manager for the upgrade of the Kyalami Grand Prix Circuit. He was involved in the installation of new guardrails on the racetrack and performed maintenance on the first 9 Hour race in 2019.

Willem routinely consults on road safety products and systems.

## AREAS OF EXPERTISE

Trojica Trading provides road safety equipment and materials to the construction and other industries. The company is experienced in supply, installation, repair, and consulting, and additionally provides plant hire, earth moving, and road paint and beads services.

## SHAREHOLDING

Trojica Trading is a Level 2 BBBEE contributor.
